[REDACTED]

**SYNOPSIS**

On November 20, 2017, I met with several different agencies and [REDACTED] at the Culbertson's property in Anacortes, Washington to review Cooke Aquaculture net pen #2 structure.

**DETAILS**

On November 20, 2017, I met with several different agencies and [REDACTED] at the Culbertson's property in Anacortes, Washington to review Cooke Aquaculture net pen #2 structure. During the review, I was informed by Washington State Department of Revenue [REDACTED] of another recent incident involving a Cooke Aquaculture net pen.

According to [REDACTED], in May of 2017, a Cooke Aquaculture net pen, located in Clam Bay, Washington, broke loose from its moorings. This incident was not reported to the responsible State of Washington agencies by Cooke Aquaculture. I requested that [REDACTED] forward to me any information he has on this incident.

On November 21, 2017, [REDACTED] forwarded me several emails detailing the alleged incident of May 2017. Contained within the emails was the correspondence with [REDACTED], [REDACTED]  
[REDACTED]

[REDACTED] explained in her email that on May 25, 2017, she witnessed a "separation" of two of the net pens which are located within [REDACTED]. She believes that "emergency" equipment was brought in at night and a vessel held the pens in place while repairs were made. She does not believe any fish escaped during the incident.

In a subsequent email, date October 19, 2017, [REDACTED] further explains that during the May 2017 incident, a large amount of equipment was delivered near her residence which caused traffic issues. During her discussion with the person directing traffic near her residence, she was informed that "they had some equipment failure that necessitated the unusual hour for delivery."
